

MITOSIL

SILICON SEPARATOR IN SPRAY

MITOSIL prevents sticking of material during gluing process, plastic moulding and foam expanding.

Prevents adhesion and therefore facilitates cleaning and maintenance of technology equipment, machinery, tools and various surfaces.

Can also be used as a lubricant for hinges, fasteners, guides, pulleys, joints, etc.

Impregnates and highlight the splendour of stone, rubber, textile surfaces and leather shoes.

Characteristics of silicon separator:

- **Silicone-based**, thus preventing adhering materials on working surfaces of equipment, machinery, tools and various other surfaces.
- **Colourless and odorless liquid in spray** allows wide application in industry, craft, as well as in closed domestic area.
- **Organic solvents free**, therefore does not attack the materials and it is suitable for application to all kinds of surfaces.
- **Hidrofobic properties** allows using product for impregnation materials which should be waterproof and on surfaces after use should be cleaned.
- **Resistant to high and low temperature**, so it is suitable for exterior, interior and industrial use in demand conditions.

Benefits of new spray:

- **Spray uniformly in all positions** of spray.
- **A spray nozzle is protected** from mechanical damage by a covering cap which, during use, there is no need to remove.
- Spraying intensity can be **controlled by pressing the trigger**.

Spray uniformly in all positions of spray.

Suitable for all kinds of material.

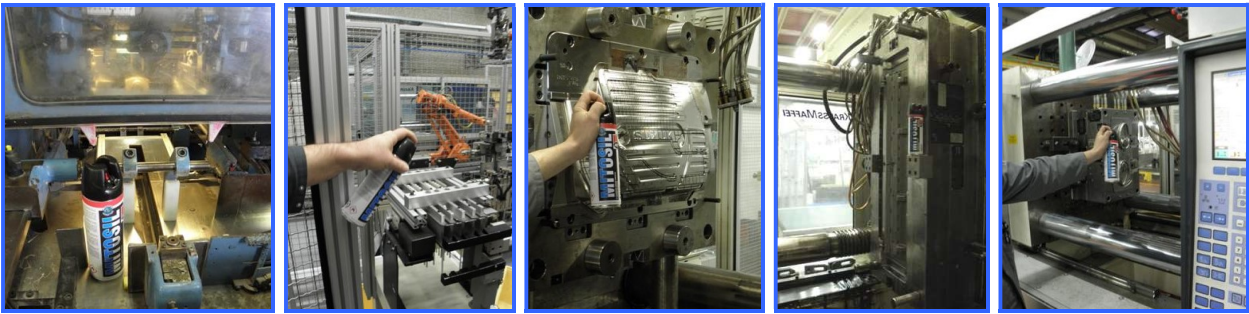

WE'RE ALWAYS IN BETWEEN

Fields of application:

INDUSTRY AND CRAFT APPLICATION:

- **Prevents sticking of materials** and due to lower congestion increases productivity in the use of adhesives and in spraying plastics in moulds.

- **Protects against adhering materials** and therefore facilitates maintenance and prolongs the life of technological equipment, tools, agricultural machinery and a variety of surfaces.

DOMESTIC APPLICATION:

- **A lubricant** for hinges, fasteners, guides, pulleys, joints and other mechanisms...

- **Impregnates and highlight the splendour** of unpolished stone, rubber, textile surfaces and leather shoes.
