Subject: Opinion on conformity assessment for product MITOPUR A1 / 5 - N21-MT111

In the sample of polyurethane adhesive MITOPUR A1 / 5, the concentration of isocyanates and the specific migration of primary aromatic amines into the model solution of 3% acetic acid were determined.

The specific migration of primary aromatic amines found was less than the lower limit of determination of the analytical method used.

The concentration of isocyanates found in the sample was less than the limit value for isocyanates set out in Annex I to Commission Regulation (EC) No 1234/2007. 10/2011 of 14 January 2011 on plastic materials and articles intended to come into contact with food (as amended).

Based on the above results, it can be estimated that the **MITOPUR A1 / 5** sample **complies** with the provisions regarding the content of isocyanates and the specific migration of primary aromatic amines into the 3% acetic acid model solution:

-10. and Article 11 of Regulation (EC) No 10/2011 on plastic materials and articles intended to come into contact with foodstuffs (as amended by 321/2011, 1282/2011, 1183/2012, 202/2014, 2015/174, 2016/1416, 2017/752, 2018/79, 2018/213, 2018/831, 2019/37, 2019/988, 2019/1338, 2020/1245);

-Article 3 (1a) of Regulation (EC) No Commission Regulation (EC) No 1935/2004 of 27 October 2004 on materials and articles intended to come into contact with foodstuffs and repealing Directives 80/590 / EEC and 89/109 / EEC for tested conditions of use.

With respect,

Bojan Borin
